

## GENETIC CERTIFICATE

**Ms Birgit STOETTRUP** 

Oestervang 25 8380 Trige DENMARK

Name: Styleofitaly Luis

Majashappy

Breed: Bernese Mountain Dog

ID Number : **578 077 000 223 401** Pedigree Number : **DK07206/2014** 

Gender: Male

Birth date: 26/01/2014

Owner:

**STOETTRUP Birgit** 8380 Trige (DK)

Customer Nb : C76293

Sample Number: 498 551 (Authenticated)

Sample type: Blood sample Sample date: 20/04/2016 Request date: 27/04/2016

Sampler veterinarian : KIRKETERP Christian

8250 Egaa (DK)

Official number: 4020

File Nu.: 117 312

Animal Number : 138 160 Result code : 217678

## **Histiocytic Sarcoma (pre-test)**

Result: Index B

Interpretation: Neutral index - not predictive of higher or lower risk of developing Histiocytic Sarcoma.

This genetic pre-test should be just one of the many selection criteria. It is important within a breeding population to give priority to individuals with the best index but is also of the utmost importance when selecting

breeding pairs that sufficient genetic diversity is maintained in the breed.

Lina Muselet Genetics Engineer

Result established on 04/05/2016 Certificate issued on 04/05/2016

## Explanation

This genetic pre-test for Histiocytic Sarcoma is based on 9 genetic markers (Panel SH0912) identified from scientific research on Histiocytic Sarcoma on Bernese Mountain Dogs carried out by the Canine Genetics Team of the CNRS of Rennes, France. The methods used to calculate the genetic index were based on a population of 1081 European dogs, mainly from France. The pre-test for Histiocytic Sarcoma has three possible results expressed as an index: index A, the tested individuals have four times the chance of not developing Histiocytic Sarcoma; index B means neutral index; index C, the tested individuals have four times the risk of developing Histiocytic Sarcoma. This genetic pre-test is simply a probability test, and this must be clearly accepted by the user.

This genetic pre-test is designed solely to be a tool to help breeders in their breeding decisions. As a probability test, this genetic pre-test is subject to error and should not therefore be used, under no circumstances, as a commercial or advertising point by breeders.

The ANTAGENE laboratory will provide the necessary state-of-the-art technology to guarantee the reliability of its genetic test.
