

GENETIC CERTIFICATE

Name : **Prima-Sennen's Eliza of Duchess**

Dr Uffe NORDGREN
Koge Bugt Dyreklinik
Tangmosevej 111
4600 Koge
DENMARK

Specie : **Dog**
Breed : **Bernese Mountain Dog**

ID Number : **208 274 000 108 566**
Pedigree Number : **DK0039872018**

Sample Number : **652 774**
Sample type : Blood sample
Sample date : 20/09/2019
Request date : 26/09/2019

Gender : **Female**
Birth date : **07/12/2017**

Owner :
RANDLOV PETERSEN Susanne
2670 Greve (DK)
Customer Nb : C73770

Sample realized by :
NORDGREN Uffe (Veterinarian)
4600 Koge (DK)
Official Nb : **4728**
Authenticated sample

File Nu. : 168 239
Animal Number : 207 528
Result code : 380084

Histiocytic Sarcoma (Test SH)

Result : **Index A**

Interpretation : The individual tested has a four times lower risk of developing Histiocytic Sarcoma.

This genetic test should be just one of the many selection criteria. It is important within a breeding population to give priority to individuals with the best index but is also of the utmost importance when selecting breeding pairs that sufficient genetic diversity is maintained in the breed.

Result established on 02/10/2019
Certificate issued on 02/10/2019

Explanation

This genetic test for Histiocytic Sarcoma is based on 9 genetic markers (Panel SH0912) identified from scientific research on Histiocytic Sarcoma on Bernese Mountain Dogs carried out by the Canine Genetics Team of the CNRS of Rennes, France. The methods used to calculate the genetic index were based on a population of 1081 European dogs, mainly from France. The test for Histiocytic Sarcoma has three possible results expressed as an index: index A, the individual tested has a four times lower risk of developing Histiocytic Sarcoma ; index B means neutral index ; index C, the individual tested has a four times higher risk of developing Histiocytic Sarcoma. This genetic test is simply a probability test, and this must be clearly accepted by the user.

This genetic test is designed solely to be a tool to help breeders in their breeding decisions. As a probability test, the test SH is subject to error and should not therefore be used, under no circumstances, as a commercial or advertising point by breeders.

The ANTAGENE laboratory will provide the necessary state-of-the-art technology to guarantee the reliability of its genetic test.
