

## GENETIC CERTIFICATE

**Ms Helle SINCLAIR**

Fjellerup Bygade 36  
8585 Glesborg  
DENMARK

Name : **Whiskey Tango From  
Orsina's Land**

Specie : **Dog**  
Breed : **Bernese Mountain Dog**

ID Number : **705 091 000 018 907**  
Pedigree Number : **DK20139/2019**

Gender : **Male**  
Birth date : **21/12/2018**

Owner :  
**SINCLAIR Helle**  
8585 Glesborg (DK)  
Customer Nb : C75415

Sample Number : **683 536**  
Sample type : Blood sample  
Sample date : 23/03/2020  
Request date : 30/04/2020

Sample realized by :  
**KLITGAARD Marianne** (Veterinarian)  
7900 Nykobing Mors (DK)  
Official Nb : **1260**  
Authenticated sample

File Nu. : 176 395  
Animal Number : 219 196  
Result code : 406417

### Histiocytic Sarcoma (Test SH)

Result : **Index B**

Interpretation : Neutral index - not predictive of higher or lower risk of developing Histiocytic Sarcoma.

This genetic test should be just one of the many selection criteria. It is important within a breeding population to give priority to individuals with the best index but is also of the utmost importance when selecting breeding pairs that sufficient genetic diversity is maintained in the breed.

Result established on 14/05/2020

Certificate issued on 14/05/2020

#### Explanation

This genetic test for Histiocytic Sarcoma is based on 9 genetic markers (Panel SH0912) identified from scientific research on Histiocytic Sarcoma on Bernese Mountain Dogs carried out by the Canine Genetics Team of the CNRS of Rennes, France. The methods used to calculate the genetic index were based on a population of 1081 European dogs, mainly from France. The test for Histiocytic Sarcoma has three possible results expressed as an index: index A, the individual tested has a four times lower risk of developing Histiocytic Sarcoma ; index B means neutral index ; index C, the individual tested has a four times higher risk of developing Histiocytic Sarcoma. This genetic test is simply a probability test, and this must be clearly accepted by the user.

This genetic test is designed solely to be a tool to help breeders in their breeding decisions. As a probability test, the test SH is subject to error and should not therefore be used, under no circumstances, as a commercial or advertising point by breeders.

The ANTAGENE laboratory will provide the necessary state-of-the-art technology to guarantee the reliability of its genetic test.
